TEST SLANT WELL LONG TERM PUMPING MONTHLY MONITORING REPORT NO. 23
1-SEPTEMBER-17 - 30-SEPTEMBER-17

1.0 EXECUTIVE SUMMARY

The Coastal Development Permit #A-3-MRA-14-0050 dated 8-Dec-14 (CDP) granted California American Water Company permission for development consisting of: Construction, operation and decommissioning of a test slant well (TSW) at the CEMEX sand mining facility in the City of Marina and beneath Monterey Bay in the County of Monterey. Special condition 11 "Protection of Nearby Wells" of that permit requires groundwater monitoring of a minimum of four wells on the CEMEX site within 2,000 ft. of the test well and one or more offsite wells to record water and salinity levels (see Appendix A-1). As per the CDP this report is the twenty-third of the long term pumping monthly reports summarizing water level and water quality data from the Test Slant Well and monitoring well network. This twenty-third report is for the period of TSW operations from September 1 to September 30, 2017. The purpose of these monthly reports is to identify any potential impacts from slant well pumping to inland aquifers.

After completion of the Test Slant Well, a Long-Term pumping test commenced on April 22, 2015. However, after 44 days of pumping (5-Jun-15), the Test Slant Well was voluntarily shut off so that the Hydrogeologic Working Group (HWG) could evaluate regional trends in water levels and salinity. In the period following the voluntary shutdown, revisions were made to Condition 11 of the CDP which are included in Appendix A-2 of this report. Specifically, these revisions (Coastal Development Permit Amendment A-3-MRA-14-0050-A1 dated 13-Oct-15) state:

- The Hydrogeology Working Group shall review weekly monitoring data and prepare a monthly report that shall be submitted to the Executive Director documenting the regional/background groundwater elevation trends and TDS level trends.
- If drawdown exceeds 1.5 feet at MW-4 from regional groundwater elevation trends, or if TDS levels increase more than two thousand parts per million from regional TDS level trends, the Permittee shall immediately stop the pump test and inform the Executive Director.

Following approval of these revisions, the long term pumping of the Test Slant Well resumed on October 27, 2015. However, the well was turned off from March 4 to May 2, 2016 to repair a portion of the temporary discharge line that had been impacted by winter storms.

1.1 Groundwater Levels and TDS Trends – September 1 through September 30, 2017

Data collected for the period September 1, 2017 through September 30, 2017 show that groundwater levels in MW-4S and MW-4M continue to follow regional and seasonal groundwater level trends with no impacts attributed to Test Slant Well pumping during that period. Figure 2-3 shows a 30-month record of groundwater elevations for the MW-4 monitoring well cluster. Figure 2-3 shows data beginning 22-April-15 before the start of the long-term pumping test through to 30-September-17. Figure 4-1 shows a more focused record for MW-4 from 1-September-17 to 30-September-17. Discussions of these trends are provided below.

TDS concentrations in MW-4S and MW-4M were determined from data collected from transducers in each well. A specific TDS/EC[1] ratio was determined from 17 sample sets collected during nine (9) separate sampling events from both monitoring wells. For MW-4S the ratio was 0.67 and for MW-4M the ratio was 0.68. Data for the current month indicates that TDS concentrations in MW-4S have been stable. Sampling of the well had purposely not been conducted since mid-March 2016, to allow assessment of the conductivity trend without the interference/influence mixing of water from sample pumping. The conductivity has declined to levels below those recorded in August/September 2015 (an extended time period with no well sampling). Sampling has resumed on a quarterly basis starting in July 2016. From April 2015 through May 2017 the TDS concentrations in MW-4M followed a regional slightly increasing trend (see Figure 3-3). However, the slightly increasing trend occurred consistently during both non-pumping and pumping periods, and therefore likely represents seasonal climate changes or regional pumping, and a continuation of historical seawater intrusion.

On several occasions the Test Slant Well has unexpectedly stopped pumping due to a Pacific Gas & Electric Company (PG&E) low voltage issues in the immediate area. The pump has also been turned off intentionally to perform repairs on the Test Slant Well's temporary discharge line. This table summarizes the details of the pumping interruptions encountered during the Long Term Pumping Test:

[1] Specific Electrical Conductance, umhos/cm

Pumping Interruptions					
Pump Off		Pump On		Time Off (hours)	Cause
Date	Time	Date	Time		
1/19/2016	11:10 AM	1/20/2016	8:51 AM	22	PG&E power interruption

As a precaution during the winter storm events the well was turned off from December 24, 2016 through January 11, 2017. During this time maintenance of the Test Slant Well temporary discharge line was performed.

The site experienced rainfall during the months of January through May 2016, and again in early June, late July, August, and October 2016, and through April 2017. Precipitation records from the local Marina, CA station[2] are overlaid on the water level plots for MW-3 (Figure 2-2), MW-4 (Figures 2-3 and Figure 4-1), and MW-8 (Figure 2-7). The larger precipitation events that took place between mid-October 2016 and late March 2017 likely contributed (through precipitation recharge and/or impacts of precipitation events on basin pumping) to the upward trend of groundwater levels from approximately mid-October 2016 in MW-4S through early March 2017. Overall, the seasonal trend of groundwater elevations at MW-4 from April 2015 through September 2017 are consistent regardless of the Test Slant Well pump being on or off (see Figure 2-3).

Groundwater elevation and TDS changes in the compliance well (MW-4S and MW-4M) show no measurable impact that can be attributed to TSW pumping throughout the monitoring record shown on Figure 2-3.

2.0 BACKGROUND

California American Water Company (CalAm) is working to increase sustainability of their water supply portfolio to meet the long-term needs of their customers on the Monterey Peninsula. The plan includes construction of a seawater intake system and either a 6.4 million gallon per day (MGD) or 9.6 MGD desalination plant. The project is known as the "Monterey Peninsula Water Supply Project" (MPWSP). The Monterey Regional Water Supply Project will meet CalAm's long-term regional water demands, improve ground water quality in the seawater-intruded Salinas Basin, and expand agricultural water deliveries.

A Test Slant Well (TSW) was constructed between December 2014 and March 2015 at the CEMEX sand mining facility in Marina, California to evaluate the feasibility of extracting seawater from the extreme coastal margin using slant-drilled wells constructed in the aquifers that penetrate subsurface aquifers beneath the shoreline. A key component of the project alternative at the CEMEX facility is to provide an intake system that can supply seawater from the shallow Dune Sand Aquifer and 180 FTE. Monitoring changes in ground water level elevations and water quality in the vicinity of the Test Slant Well is a crucial part of this project. The monitoring program includes pumping of the Test Slant Well over an extended period ranging up to 24 months. Data collected from ground water monitoring during

[2] Daily precipitation data for NCDC/NOAA station MARINA 0.8 SSE CA US displayed period of record April 22, 2015 to May 7, 2016 (US1CAMT0021) and May 8, 2016 through present month (US1CAMT0041).

operation of the Test Slant Well will be used to update and refine the CEMEX Model and North Marina Groundwater Model (NMGWM), which then will be used to assess long-term impacts to inland water sources from operation of slant wells along the coast.

The monitoring program includes monitoring points on the CEMEX facility as well as offsite monitoring points. The new monitoring wells, installed as part of the Test Slant Well project, were designed for site specific hydrogeological conditions at the CEMEX site. Specifically, wells installed at the CEMEX site measure changes in water level and water quality in the shallow Dune Sand Aquifer, the 180-FTE Aquifer, and the 400-FT Aquifer.

The off-site monitoring wells installed outside the CEMEX facility are within approximately a two to four mile radius of the Test Slant Well. These off-site monitoring wells are completed (i.e. screened) within the shallow Dune Sand Aquifer, or Perched "A" Aquifer, the 180-FTE Aquifer, 180-FT Aquifer, and the 400-FT Aquifer. All of the off-site monitoring wells are currently being monitored as part of the TSW long-term pumping test monitoring program.

2.1 Regulatory Compliance

The Long-Term pumping test commenced on April 22, 2015. However, after 44 days of pumping (June 5, 2015), the Test Slant Well was voluntarily shut off so that the HWG could evaluate regional trends in water levels and salinity. The long term pumping of the Test Slant Well resumed on October 27, 2015 under Coastal Development Permit Amendment No. A-3-MRA-14-0050-A1 dated 13-Oct-15 (Appendix A-2).

This monthly report summarizes water level and water quality data from the Test Slant Well and monitoring well network over a one month period[3]. The purpose of this report is to identify any potential impacts from slant well pumping to inland aquifers beyond normal seasonal trends and to provide an analysis to answer the following:

- Does drawdown exceed 1.5 feet at MW-4 from regional groundwater elevation trends?
- Do TDS levels increase more than two thousand parts per million from regional TDS level trends?

If weekly data indicates that either of these thresholds is crossed, then the Permittee (CalAm) shall immediately stop the pumping test and inform the Executive Director. Weekly reporting continues to

[3] However, for completeness, the entire water level elevation and TDS records are included for all the monitoring wells.

occur with monitoring results posted to the CalAm website (www.watersupplyproject.org) for public review. This report is submitted in compliance with Coastal Development Permit Amendment No. A-3-MRA-14-0050-A1 dated 13-Oct-15 requirement of submittal of a monthly report and summarizes the twenty-third month of monitoring performed for the period 1-September-17 through 30-September-17.

Data show that both ground water and TDS levels are in compliance with the CDP conditions.

2.2 Monitoring Well Network

In accordance with Coastal Development Permit #A-3-MRA-14-0050 dated 8-Dec-14; both on-site and off-site monitoring wells were constructed to allow monitoring of groundwater levels for the baseline period and during the long-term monitoring period. Monitoring wells MW-1, MW-3, MW-4, and MW-5 were constructed during the period from December 2014 to March 2015. Each monitoring well site consists of a cluster consisting of three monitoring wells completed at different depth intervals. Four more monitoring well clusters (MW-6, MW-8, MW-9, and MW-7) were completed on 5-Apr-15, 29-May-15, 30-Jun-15, and 9-Aug-15. The naming convention for the monitoring wells in each cluster is as follows: MW 1S, MW-1M and MW-1D refer to shallow, middle and deep monitoring zones respectively for monitoring well cluster MW-1. Figure 1-1 shows the monitoring well locations and Table 1 summarizes general technical details of the monitoring wells.

Data collected from Monitoring MW-5S over the duration of the monitoring program indicates that the MW-5S well screen is not screened in the shallow Dune Sand Aquifer, but rather is screened in a perched aquifer that lies above the Dune Sand Aquifer or its equivalent in the Landfill highland area. Therefore the monitoring wells has re-designated as MW-5S(P) to indicate that it is shallow screened monitoring well which provides representative groundwater levels in a perched aquifer. Table 1 and figures of this report have been revised to reflect this change.

Likewise, review of data for MW-6D indicates that the well screen is likely screened in the lower portion of the 180-Ft Aquifer since the groundwater level trends are nearly identical with Monitoring Well MW-6M. Therefore monitoring well is re-designated as Monitoring Well MW-6M(L) to indicate that the well provides representative groundwater levels of the deeper portion of the 180-FT Aquifer in this location.

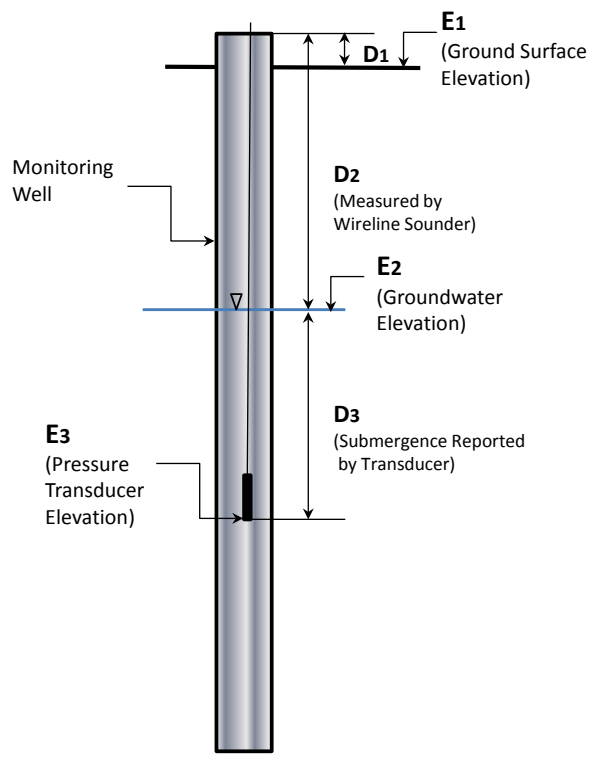
Several existing wells have been monitored for water level and salinity: one well at the Monterey Regional Water Pollution Control Agency Plant (MRWPCA Well 1) was monitored from April 22 through June 17, 2015 when the transducer failed. Due to the presence of oil in the well, the transducer will not be replaced. The second well is one of the existing wells on the CEMEX property (the CEMEX North Well). This well was monitored from April 22 through October 30, 2015. Pumping was moved from the

CEMEX South Well to the North Well on October 15, 2015. Monitoring resumed on the CEMEX North well on October 30, 2015. The CEMEX North Well collapsed on November 13, 2015. Although monitoring continued after the well collapse, monitoring of the well showed that water in the upper portion of the casing was isolated from water in the screen interval, since water levels did not return to pre-collapse levels. Monitoring of the CEMEX North Well ceased on February 25, 2016. Although not required for permit compliance, a stilling well was installed at the north end of the CEMEX's dredge pond (CP 1) and was monitored from April 22, 2015 until it was washed away in the storm of early December 2015. The last reading collected was recorded on December 10, 2015. At the request of CEMEX, the transducer in the CEMEX pond was replaced on July 13, 2016. However, due to access restrictions, a surveyed elevation of the new monitoring point has not been obtained. The elevation data for the dredge pond surface will be plotted when survey data is available for the new monitoring point. All points monitored, including the sites no longer monitored are reported in the weekly reports posted to CalAm's website. For the monthly reports, only the compliance well cluster (MW-4) are discussed with regard to permit compliance.

3.0 GROUND WATER LEVELS

3.1 Conversion of Transducer Pressure Measurements to Groundwater Elevations

Pressure transducer readings were converted to ground water elevation values (expressed as ft. NAVD88) using the setting depth of the pressure transducer and the ground surface elevation at the monitoring well site (see inset). After initially setting a pressure transducer in the well, and after each time a transducer is removed from a well, the transducer setting depth is determined using an electrical wire line sounder (Solinst, Model 101) to establish the depth to water in the well. The transducer elevation is then determined as follows:



$$\text{Transducer Elevation (E3)} = \text{E1} + \text{D1} - \text{D2} - \text{D3}$$

Once the transducer elevation has been established, ground water elevations in ft. NAVD88[4] are calculated from transducer submergence readings (D3) (psi converted to ft.) and depth to water measurements (D2) as follows:

[4] Elevations reported in North American Vertical Datum of 1988 (NAVD88) from Monterey California Station 9413450 is 3.24 feet higher than the station datum and 2.97 feet lower than mean sea level.

$$\text{Groundwater Elevation (E2)} = \text{E3} + \text{D3}$$

3.2 Groundwater Levels in Monitoring Wells

Groundwater levels in all of the monitoring wells, with the exception of MW-4S and MW-4M, are recorded every 15 minutes using pressure transducers. MW-4S and MW-4M record levels every five minutes. Hand water levels are collected weekly using an electronic wireline sounder.

3.3 Groundwater Level in Test Slant Well

Groundwater levels are recorded every 15 minutes in the Test Slant Well using a pressure transducer. Hand water levels are taken weekly using an electronic water level indicator and converted to True Vertical Depth (TVD) using the Test Slant Well angle of 19 degrees below horizontal.

4.0 GROUNDWATER QUALITY

4.1 Estimating Total Dissolved Solids from Electrical Conductivity (EC) Measurements

Estimation of TDS from electrical conductivity reported as specific conductance (EC) utilizes a conversion factor that is specific to a given water chemistry. Based on the normalized EC value (corrected to 25° C), a site specific EC conversion factor may be used to estimate TDS from the product of the temperature-corrected EC value and the TDS: EC conversion factor. The factor is calculated by dividing the laboratory measured TDS by the laboratory measured EC using the gravimetric calculated TDS. Accuracy of the TDS:EC conversion factor is improved through collection of on-going direct measurements of TDS in groundwater samples using laboratory gravimetric methods. Well specific average TDS:EC Ratios for MW-4S and MW-4M have been calculated using data sets from 17 samples collected during nine (9) separate sampling events between March and July 2015. The laboratory and field water quality data used to calculate the TDS:EC conversion factors are presented in Table 2. These ratios are used to convert measured conductivity from transducer data to TDS.

4.2 Specific Conductance Measurements in Monitoring Network

Specific conductance is a measurement of the ability of water to conduct electrical current. Conductivity increases as the amount of ions present in the water increases. This conductivity measurement is made at or corrected to the temperature standard of 25° C (room temperature). Since temperature affects the mobility of the ions in water, and therefore conductivity, conversion to a standard temperature is necessary so data can be easily compared.

Transducers installed in the screened section of the monitoring wells record specific conductance every 15 minutes, with the exception of MW-4S and MW-4M which record specific conductance every 5 minutes. Conductivity plots for the monitoring network are provided weekly. Conductivity plots related to the evaluation of permit compliance are discussed in Section 5.3 below.

4.3 Groundwater Quality from Laboratory Testing

To evaluate and validate conductivity data from transducers in the MW-4 series, periodic groundwater samples are being collected by pumping and compared to previous samples collected by pumping. Water samples from the monitoring wells and Test Slant Well are submitted to a California State Certified Environmental Laboratory for analysis. During the initial long term test weekly samples were collected at the Test Slant Well and MW-4 through May 27, 2015, while the remaining monitoring wells were sampled monthly. Monthly water quality samples from all well sites were then collected through July 29, 2015. Following restart of TSW pump on October 27, 2015, groundwater samples were collected from MW-4S and MW-4M on December 16, 2015, January 21, February 17, March 16, July 7 and 9, October 7, 2016, January 11, April 12, and July 12, 2017. The results of the laboratory analysis for these sampling events are summarized in Table 2. Since TSW restart, general minerals and physical properties samples have been collected from the TSW on an approximate weekly basis until the TSW was shut down for discharge pipe repairs on March 4, 2016. TSW water quality sampling resumed on May 3, 2016 following the restart of the TSW pumping after completing repairs to the discharge line. The results are summarized in Table 3. The water quality sampling results from future sampling events will be included in both weekly and monthly monitoring reports in the period they become available.

5.0 HWG ASSESSMENT OF MONITORING WELL MW-4S AND MW-4M DATA - 1-SEPTEMBER-17 TO 30-SEPTEMBER-17

5.1 General

Groundwater elevations in all monitoring wells have been monitored daily using downhole transducers and/or hand measurements in the compliance (MW-4) monitoring wells. Daily and/or weekly readings have been collected from all other monitoring wells. Figure 2-1 through 2-11[5], show groundwater elevations for monitoring wells and other monitoring points. The monitoring period includes the start of pumping on April 22, 2015, the interim period (when no pumping occurred), and the time from the re-start of long-term testing through September 30, 2017. Similarly, Figures 3-1 through 3-9 show EC

[5] Groundwater level and specific conductivity data has not been available from the Monterey Regional Pollution Control Agency well since prior to the re-start of the pumping test. Therefore, the MRPCA plots have been removed from the figure set. Also, specific conductivity data is not available from the CEMEX dredge pond or the north CEMEX well. These plots have been removed from the figure set for this report.

values for the monitoring points. As MW-4 continues to be the point of compliance in Special Condition 11 of the CDP amendment, water levels and TDS variations are discussed in detail for this well.

5.2 Groundwater Elevations for MW-4

In general, the degree of aquifer confinement is higher in the middle zone and least confined in the upper zone. This is clearly seen in the tidal fluctuations of water levels in Figure 2-3. Figure 4-1 shows the water levels in MW-4S and MW-4M at a focused scale from 1-September-17 to 30-September-17. MW-4S represents the Dune Sand aquifer, and has a muted water level response reflecting a higher storativity value (i.e. which approaches the aquifer's effective porosity or specific yield value). Daily tidal fluctuations are indistinguishable in this layer. The middle zone (MW-4M) represents the 180-FTE aquifer, and shows a semi-confined pressure response to daily tidal fluctuations that is somewhat less than the confined lower zone (MW-4D).

5.2.1 Groundwater Levels – MW-4S

Overall, an examination of the water level response in the shallow aquifer (Figure 2-3) shows distinct seasonal trends from the start of Test Slant well pumping in April 22, 2015. A downward trend occurs through the summer of 2015 during the period that the TSW was not pumping, a flat trend during the Fall of 2015, followed by an upward trend through the winter of 2015/2016. A downward trend begins again in Mid-April just prior to the re-start of the TSW and continues through about half way through October, 2016, albeit with a slightly decreasing slope from late July through October. A seasonal increase in water levels, likely due to onset of rainfall and/or a decline in regional groundwater pumping, began in Mid-October and continues through the early part of March, 2017. The groundwater level from March through August has decreased very slightly. Groundwater levels appear to be stable over the current month and is consistent with seasonal/regional water level changes, indicating no impacts from TSW pumping. Additional data to be collected weekly is provided in subsequent weekly reports and summarized in following monthly reports. Weekly and monthly reporting will allow for continued tracking of regional groundwater level trends in relation to MW-4S and MW-4M water levels.

5.2.2 Groundwater Levels – MW-4M

This report provides data showing groundwater elevations from April 22, 2015 through September 30, 2017. Like MW-4S, MW-4M groundwater levels show a distinct seasonal trend, with decreasing water levels in the spring and summer months and increasing water levels during fall and winter. There is a downward trend from mid-March through early July 2016 corresponding to a period of decreased precipitation and increased regional pumping. The slope of the water level surface appears to flatten in July with a slight upward slope beginning in August, 2016 and a continued

increasing slope through the early part of March, 2017 likely as a result of decreased regional pumping and onset of the rainy season.

After a brief increase in water levels from mid-March through the end of March there was a gradual decrease during the entire month of April followed by a continued decrease in May through July 2017. This is likely the result of less precipitation and the seasonal increase in overall groundwater pumping in the basin. This pattern is visible in the records of all the monitoring wells, particularly in the deeper completions. During the month of August, 2017 water levels began to show a slight upward trend and continuing through the month of September. The water level trend in MW-4M continues to be similar to the trend in MW-4D, further confirming that the observed trend in MW-4M reflects regional water level trends (i.e. the 400-FT aquifer in all deep monitoring wells has shown no influence from TSW pumping). In addition, the MW-4M water level trend is similar to MW-5M, MW-6M, MW-7M, MW-8M, and MW-9M, further supporting the reflection of regional water level trends.

5.3 TDS concentrations in MW-4

The levels of electrical conductivity (EC), which is an indicator of total dissolved solids (TDS) in the MW-4 monitoring wells, have been monitored daily through use of dedicated downhole transducers with electrical conductivity probes. Figure 3-3 shows EC values in MW-4 from the start of the long term pumping test on April 22, 2015 through September 30, 2017 for all three MW-4 monitoring wells (S, M, and D). Figure 5-1 shows the most recent month of monitoring with an expanded scale for the period from 1-September-17 to 30-September-17.

5.3.1 TDS concentrations for MW-4S

Figure 3-3 shows that conductivity in MW-4S, like water levels exhibit a seasonal trend. Conductivity increases as water levels increase in the Fall through Spring months (see Figure 2-3 and 3-3). Figure 5-1 shows the specific conductivity in MW-4S and MW-4M at a time scale focused from September 1, 2017 to September 30, 2017. In 2016 the TDS concentration trend shows a slight upward trend that begins in early February 2016 while the TSW is pumping and continues after the TSW was shut off for discharge pipe repairs. During sampling events, vertically mixing of groundwater from insertion and removal of the sampling pump slightly elevates the conductivity signature, due to stratification of salinity in the aquifer opposite the well screen. However, prior to early February 2016 the conductivity returned to the pre-sampling value within approximately two weeks (see Figure 3-3 for the month of December 2015/January 2016 for an example). Permanent pumps were installed in MW-4S, MW-4M, and MW-4D on February 11, 2016 in an attempt to limit the magnitude of mixing during the sampling event. With additional data collection, it appears that the increase in conductivity after sampling was representative of a seasonal increase in TDS through the winter of 2015 and spring of 2016. Samples have been collected on a quarterly basis starting in July 2016 to minimize artificial mixing of salinity. The salinity

has remained stable through the Spring 2017 and has decreased from the early part of March through the current month (see Figure 3-3 and 5-1), possibly due to the extremely wet winter/spring season. In addition to seasonal influences, the conductivity signature in MW-4S also appears to be influenced by operation of the South CEMEX well. After 30-months of monitoring, it appears that a seasonal trend is superimposed on a longer term multi-year trend. It is possible the longer term decline from Spring 2015 to Summer 2017 may reflect increasing annual rainfall totals (Marina station) that include 12.08 inches (2014/15), 15.25 inches (2015/16), and 22.90 inches (2016/17).

Water quality sampling was conducted on January 11, 2017, April 12, 2017, and July 12, 2017. As before, the conductivity rises as water in the borehole is mixed during sample pumping, but returned to a pre-sampling level following the sampling event.

5.3.2 TDS concentrations for MW-4M

Figure 3-3 shows conductivity in MW-4M is slightly increasing continuously with time, for the monitoring period from April 22, 2015 to September 30, 2017. The consistent slight rise in TDS shows no change with TSW pumping and is strongly indicative of a regional trend in TDS concentration. Figure 5-1 shows the specific conductivity in MW-4S and MW-4M at an increased scale indicating that during this monitoring period (September 1 through September 30) conductivity in MW-4M has increased very slightly. The regional very slight increase in conductivity may be indicative of continued slow progress of seawater intrusion due to the continued landward groundwater gradient in the aquifer penetrated by MW-4M (please see groundwater elevations provided on the attached figures for MW-1M, MW-3M, MW-4M, and MW-5M). This condition is also documented in annual seawater intrusion maps prepared by Monterey County Water Resources Agency. Alternatively, slight instrument drift may account for a portion of the trend.

6.0 HWG SUMMARY

For the period April 22, 2015 through September 30, 2017 ground water levels and TDS concentrations have not exceeded the threshold conditions set forth in Coastal Development Permit Amendment No. A-3-MRA-14-0050-A1. Furthermore, based on data collected before and after the recommencement of Test Slant Well pumping (22-April-15 to 30-September-17), and subsequent power and development related short-term well shut-offs, the following is the consensus of the HWG:

- Data collected for the period September 1 through September 30 shows groundwater levels in MW-4S and MW-4M continue to display regional trends consistent with the entire record from April 22, 2015 through September 30, 2017. Therefore, groundwater levels in MW-4S and MW-4M continue to show no influences that can be attributed to Test Slant Well pumping or non-pumping during the period (see Figure 2-3 and Figure 4-1).

- Data collected for the period September 1 through September 30 shows TDS concentrations in MW-4S and MW-4M continue to display regional and/or seasonal trends consistent with the entire record from April 22, 2015 through September 30, 2017.

- The TSW resumed pumping on May 2, 2016 after repair of the discharge line and has been operating as of this report, for 517 days with twenty-eight brief interruptions and one 18-day, 5-day, and 6-day interruption due to inadvertent power failures and routine well development operations. Following the December 24, 2016 18-day interruption, the pump was allowed to remain off through January 11, 2017 as a precaution during heavy storm events at that time. Maintenance of the Test Slant Well temporary discharge line was performed on January 6, 2017 during this period of non-pumping. Groundwater level changes and TDS changes in the compliance wells (MW-4S and MW-4M) continue to indicate no impact from TSW pumping or non-pumping during this monitoring period and continue to remain within compliance with CCC permit requirements for the TSW test program.

Notes:

°C = Degrees Celsius
CU = Color Units
Meq/L = Milliequivalents per Liter
mg/L = Milligrams per Liter
NTU = Nephelometric Turbidity Units
pg/L = Picograms per Liter
TON = Threshold Odor Number
µg/L = Micorgrams per Liter
µmhos/cm = Micromhos per Centimeter

ND = NOT DETECTED at or above the Reporting Limit (RL) or Practical Quantitation Limit (PQL). See laboratory water quality reports for RL and PQL values.

[1] Using EPA Method 200.8, Arsenic values are overstated due to matrix interference caused by high chloride levels. The overstated values are in laboratory reports through February 11, 2016. Going forward, EPA Method 1640 will be used for Arsenic analysis only.

Notes:

°C = Degrees Celsius
CU = Color Units
Meq/L = Milliequivalents per Liter
mg/L = Milligrams per Liter
NTU = Nephelometric Turbidity Units
pg/L = Picograms per Liter
TON = Threshold Odor Number
µg/L = Micorgrams per Liter
µmhos/cm = Micromhos per Centimeter

ND = NOT DETECTED at or above the Reporting Limit (RL) or Practical Quantitation Limit (PQL). See laboratory water quality reports for RL and PQL values.

[1] Using EPA Method 200.8, Arsenic values are overstated due to matrix interference caused by high chloride levels. The overstated values are in laboratory reports through February 11, 2016. Going forward, EPA Method 1640 will be used for Arsenic analysis only.

COASTAL DEVELOPMENT PERMIT

On November 12, 2014, by a vote of 11-0, the California Coastal Commission granted to California American Water Company (Cal-Am) Coastal Development Permit #A-3-MRA-14-0050 subject to the attached standard and special conditions, for development consisting of:

> Construction, operation, and decommissioning of a test slant well at the CEMEX sand mining facility in the City of Marina and beneath Monterey Bay in the County of Monterey.

Issued on behalf of the Coastal Commission on December 8, 2014.

CHARLES LESTER
Executive Director

By: ALISON J. DETTMER
Deputy Director
Energy, Ocean Resources, and Federal Consistency Division

Acknowledgment:

The undersigned Permittee acknowledges receipt of this permit and agrees to abide by all terms and conditions thereof.

The undersigned Permittee acknowledges that Government Code Section 818.4, which states in pertinent part, that: "A public entity is not liable for injury caused by the issuance… of any permit…" applies to the issuance of this permit.

IMPORTANT: THIS PERMIT IS NOT VALID UNLESS AND UNTIL A COPY OF THE PERMIT WITH THE SIGNED ACKNOWLEDGMENT HAS BEEN RETURNED TO THE COMMISSION OFFICE (14 Cal. Admin. Code Section 13158(a).)

12/8/14
Date

Signature of Permittee or Representative

STANDARD CONDITIONS

This permit is subject to the following standard conditions:

1. **Notice of Receipt and Acknowledgment**. The permit is not valid and development shall not commence until a copy of the permit, signed by the Permittee or authorized agent, acknowledging receipt of the permit and acceptance of the terms and conditions, is returned to the Commission office.

2. **Expiration**. If development has not commenced, the permit will expire two years from the date on which the Commission voted on the application. Development shall be pursued in a diligent manner and completed in a reasonable period of time. Application for extension of the permit must be made prior to the expiration date.

3. **Interpretation**. Any questions of intent of interpretation of any condition will be resolved by the Executive Director or the Commission.

4. **Assignment**. The permit may be assigned to any qualified person, provided assignee files with the Commission an affidavit accepting all terms and conditions of the permit.

5. **Terms and Conditions Run with the Land**. These terms and conditions shall be perpetual, and it is the intention of the Commission and the Permittee to bind all future owners and possessors of the subject property to the terms and conditions.

SPECIAL CONDITIONS

This permit is subject to the following special conditions:

1. **Proof of Legal Interest and Other Approvals.** The Permittee shall provide to the Executive Director a copy of each of the following approvals or documentation from the relevant agency that such approval is not required:
   a. PRIOR TO PERMIT ISSUANCE, proof of legal interest in the project site.
   b. PRIOR TO CONNECTING TO THE OUTFALL, the negotiated agreement or memorandum of understanding between the applicant and the Monterey Regional Water Pollution Control Agency ("MRWPCA") regarding connection and use of the ocean outfall for discharge of water produced from the test well.
   c. PRIOR TO ISSUANCE OF CDP 9-14-1735, a lease from the State Lands Commission.

   The Permittee shall inform the Executive Director of any changes to the project required by, or resulting from, these permits or approvals. Such changes shall not be incorporated into the project until the Permittee obtains a Commission amendment to this permit, unless the Executive Director determines that no amendment is legally required.

2. **Liability for Costs and Attorneys Fees.** The Permittee shall reimburse the Coastal Commission in full for all Coastal Commission costs and attorneys fees – including (a) those charged by the Office of the Attorney General; and (b) any court costs and attorneys fees that the Coastal Commission may be required by a court to pay – that the Coastal Commission incurs in connection with the defense of any action brought by a party other than the Permittee against the Coastal Commission, its officers, employees, agents, successors, and assigns challenging the approval or issuance of this permit, the interpretation and/or enforcement of permit conditions, or any other matter related to this permit. The Coastal Commission retains complete authority to conduct and direct the defense of any such action against the Coastal Commission.

3. **Project Construction.** The Permittee shall conduct project construction as described and conditioned herein, including the following measures:
   a. Project-related construction shall occur only in areas as described in the permit application.
   b. Project-related construction, including site preparation, equipment staging, and installation or removal of equipment or wells, occurring between February 28 and October 1 of any year is subject to the timing and species protection requirements of Special Condition 14.
   c. Construction equipment and materials, including project-related debris, shall be placed or stored where it cannot enter a storm drain or coastal waters. The Permittee shall ensure that all construction personnel keep all food-related trash items in sealed containers and remove them daily to discourage the concentration of potential predators in snowy plover habitat. All trash and construction debris shall be removed from work areas and properly disposed of at the end of each work day at an approved upland location. All vegetation removed from the construction site shall be taken to a certified landfill to prevent the spread of invasive species.
   d. To reduce construction noise, noise attenuation devices (e.g., noise blankets, sound baffles, etc.) shall be installed around all stationary construction equipment, including drill rigs.
   e. All project vehicles shall maintain speeds of 10 miles per hour or less when at the project site. Prior to moving any vehicle, project personnel shall visually inspect for special-status species under and around the vehicle, and shall notify the on-site biologist should any be detected.
   f. To avoid predation of special-status species, wire excluders or similar anti-perching devices shall be installed and maintained on the top of all aboveground structures (e.g., electrical panel) to deter perching by avian predators.

   No changes to these requirements shall occur without a Commission amendment to this permit unless the Executive Director determines that no amendment is legally required.

4. **Protection of Water Quality.** PRIOR TO COMMENCEMENT OF CONSTRUCTION, the Permittee shall submit an erosion control plan for Executive Director review and approval. The Plan shall include a schedule for the completion of erosion- and sediment-control structures, which ensures that all such erosion-control structures are in place by mid-November of the year that construction begins and maintained thereafter. The plan

shall identify standard Best Management Practices to be implemented to address both temporary and permanent measures to control erosion and reduce sedimentation. Site monitoring by the applicant's erosion-control specialist shall be undertaken and a follow-up report shall be prepared that documents the progress and/or completion of required erosion-control measures both during and after construction and decommissioning activities. No synthetic plastic mesh products shall be used in any erosion control materials. All plans shall show that sedimentation and erosion control measures are installed prior to any other ground disturbing work.

5. **Hazardous Material Spill Prevention and Response.**
   (a) PRIOR TO COMMENCEMENT OF CONSTRUCTION, the Permittee shall submit for Executive Director review and approval a project-specific Hazardous Materials Spill Prevention and Response Plan that includes:
   - an estimate of a reasonable worst case release of fuel or other hazardous materials onto the project site or into adjacent sensitive habitat areas or coastal waters resulting from project operations;
   - all identified locations within the project footprint of known or suspected buried hazardous materials, including current or former underground storage tanks, septic systems, refuse disposal areas, and the like;
   - specific protocols for monitoring and minimizing the use of fuel and hazardous materials during project operations, including Best Management Practices that will be implemented to ensure minimal impacts to the environment;
   - a detailed response and clean-up plan in the event of a spill or accidental discharge or release of fuel or hazardous materials;
   - a list of all spill prevention and response equipment that will be maintained on-site;
   - the designation of the onsite person who will have responsibility for implementing the plan;
   - a telephone contact list of all regulatory and public trustee agencies, including Coastal Commission staff, having authority over the development and/or the project site and its resources to be notified in the event of a spill or material release; and,
   - a list of all fuels and hazardous materials that will be used or might be used during the proposed project, together with Material Safety Data Sheets for each of these materials.

   The Permittee shall implement the Plan as approved by the Executive Director. The Permittee shall also ensure that all onsite project personnel participate in a training program that describes the above-referenced Plan, identifies the Plan's requirements for implementing Best Management Practices to prevent spills or releases, specifies the location of all clean-up materials and equipment available on site, and specifies the measures that are to be taken should a spill or release occur.

(b) In the event that a spill or accidental discharge of fuel or hazardous materials occurs during project construction or operations, all non-essential project construction and/or operation shall cease and the Permittee shall implement spill response measures of the approved Plan, including notification of Commission staff. Project construction and/or operation shall not start again until authorized by Commission staff.

(c) If project construction or operations result in a spill or accidental discharge that causes adverse effects to coastal water quality, ESHA, or other coastal resources, the Permittee shall submit an application to amend this permit, unless the Executive Director determines no amendment is required. The application shall identify proposed measures to prevent future spills or releases and shall include a proposed restoration plan for any coastal resources adversely affected by the spill or release.

The Permittee shall implement the Plan as approved by the Executive Director.

6. **Monitoring and Removal of Temporary Structures, Well Head Burial & Well Closure/Destruction.** The Permittee shall monitor beach erosion at least once per week over the duration of the project to ensure the slant well and monitoring wells remain covered. If the wellheads, linings, casings, or other project components become exposed due to erosion, shifting sand or other factors, the Permittee shall immediately take action to reduce any danger to the public or to marine life and shall submit within one week of detecting the exposed components a complete application for a new or amended permit to remedy the exposure.

   Upon project completion, and no later than February 28, 2018, the Permittee shall cut off, cap, and bury the slant well head at least 40 feet below the ground surface, and shall completely remove all other temporary facilities approved by this coastal development permit. To ensure timely removal, the Permittee shall post the bond or other surety device as required by **Special Condition 17** to ensure future removal measures would be appropriately supported and timed to prevent any future resurfacing of the well casing or other project components.

7. **Assumption of Risk, Waiver of Liability and Indemnity.** By acceptance of this permit, the Permittee acknowledges and agrees:
   a. that the site may be subject to hazards from coastal erosion, storm conditions, wave uprush, and tsunami runup;
   b. to assume the risks to the Permittee and the property that is the subject of this permit of injury and damage from such hazards in connection with this permitted development;
   c. to unconditionally waive any claim of damage or liability against the Commission, its officers, agents, and employees for injury or damage from such hazards; and
   d. to indemnify and hold harmless the Commission, its officers, agents, and employees with respect to the Commission's approval of the project against any and all liability, claims, demands, damages, costs (including costs and fees incurred in defense of such claims), expenses, and amounts paid in settlement arising from any injury or damage due to such hazards.

8. **No Future Shoreline Protective Device.** By acceptance of this permit, the Permittee agrees, on behalf of itself and all other successors and assigns, that no shoreline protective device(s) shall ever be constructed to protect the development approved pursuant to this permit, including the wells, supporting infrastructure, and any future improvements, in the event that the development is threatened with damage or destruction from waves, erosion, storm conditions or other natural hazards in the future. By acceptance of this permit, the Permittee hereby waives, on behalf of itself and all successors and assigns, any rights to construct such devices that may exist under Public Resources Code Section 30235.

   By acceptance of this permit, the Permittee further agrees, on behalf of itself and all successors and assigns, that the Permittee shall remove the development authorized by this permit, including the wells, supporting infrastructure, and any future improvements, if any government agency with the requisite jurisdiction and authority has ordered, and the Executive Director has concurred, that the development is not to be used due to any of the hazards identified in **Special Condition 7**. In the event that portions of the development fall to the beach before they are removed, the Permittee shall remove all recoverable debris associated with the development from the beach and ocean and lawfully dispose of the material in an approved disposal site. Such removal shall require a coastal development permit.

9. **Geology/Hazards.** The project shall be designed to meet or exceed all applicable requirements of the California Building Code. Project design and construction shall meet or exceed all applicable feasible conclusions and recommendations in the *Geotechnical Investigation for the California American Water Temporary Slant Test Well Project, Marina, Monterey County*, California, dated April 3, 2014 (GeoSoils 2014). Project components shall be sited to avoid areas identified in the coastal erosion memorandum prepared by ESA-PWA (March 2014) as subject to coastal erosion during the duration of the project.

10. **Visual Resources.** PRIOR TO PERMIT ISSUANCE, the Permittee shall submit for Executive Director review and approval a Lighting Plan prepared by a qualified engineer that includes the following:
    a. Identifies all lighting and associated infrastructure proposed for use during the test well project, such as towers, poles, electrical lines, etc. The Lighting Plan shall identify the locations, heights, dimensions, and intensity of the lighting and associated lighting infrastructure.
    b. Evaluates the effects of project lighting and associated infrastructure on wildlife in the project area and describes proposed measures to avoid or minimize any adverse effects. These measures may include shielding project lighting from off-site locations, directing lighting downward, using the minimum amount of lighting necessary to ensure project safety, and other similar measures.
    c. Affirms that all lighting structures and fixtures installed for use during the project and visible from public areas, including shoreline areas of Monterey Bay, will be painted or finished in neutral tones that minimize their visibility from those public areas.

    The Permittee shall implement the Lighting Plan as approved by the Executive Director.

11. **Protection of Nearby Wells.** PRIOR TO STARTING PROJECT-RELATED PUMP TESTS, the Permittee shall install monitoring devices a minimum of four wells on the CEMEX site, within 2000 feet of the test well, and one or more offsite wells to record water and salinity levels within the wells and shall provide to the Executive Director the baseline water and Total Dissolved Solids ("TDS") levels in those wells prior to commencement of pumping from the test well. The Hydrogeology Working Group shall establish the baseline water and TDS levels for the monitoring wells. During the project pump tests, the Permittee shall, at least once per day, monitor water and TDS levels within those wells in person and/or with electronic logging devices. The Permittee shall post data collected from all monitoring wells on a publicly-available internet site at least once per week and shall provide all monitoring data to the Executive Director upon request. If water levels drop more than one-and-one-half foot, or if TDS levels increase more than two thousand parts per million from pre-pump test conditions, the Permittee shall immediately stop the pump test and inform the Executive Director. The Hydrogeology Working Group shall examine the data from Monitoring Well 4 if the test well is shut down due to either of these causes. The Hydrogeology Working Group shall determine whether the drop in water level or increase in TDS is from a cause or causes other than the test well, and it will submit its determination to the Executive Director. If the Executive Director agrees with the Hydrogeology Working Group that the cause of the drop in water level or increase in TDS was a source or sources other than the test well, then the Executive Director may allow testing to resume. If, however, the Executive Director determines that the drop in water level was caused at least in part by the test well, then the Permittee shall not re-start the pump test until receiving an amendment to this permit.

12. **Protection of Biological Resources – Biological Monitor(s).** PRIOR TO COMMENCEMENT OF CONSTRUCTION, the Permittee shall retain one or more qualified biologists approved by the Executive Director to ensure compliance with all relevant mitigation measures and Special Conditions. The approved biologist(s) shall conduct the required preconstruction surveys, implement ongoing monitoring and inspections, keep required records, and notify Commission staff and staff of other agencies as necessary regarding project conformity to these measures and Special Conditions.

    The approved biologist(s) shall be present during daylight hours for all project construction and decommissioning activities and on a periodic basis when the biologist determines operational activities may affect areas previously undisturbed by project activities. The biologist(s) shall monitor construction equipment access and shall have authority to halt work activities, if the potential for impacts to special-status species or habitat is identified, until the issue can be resolved. The qualified biologist(s) shall immediately report any observations of significant adverse effects on special-status species to the Executive Director.

13. **Protection of Biological Resources – Training of On-site Personnel.** Prior to starting construction and decommissioning activities, the approved biologist(s) shall conduct an environmental awareness training for all construction personnel that are on-site during activities. The training shall include, at a minimum, the following:
    - Descriptions of the special-status species with potential to occur in the project area;
    - Habitat requirements and life histories of those species as they relate to the project;
    - Avoidance, minimization, and mitigation measures that will be implemented to avoid impacts to the species and their habitats;
    - Identification of the regulatory agencies and regulations that manage their protection; and,
    - Consequences that may result from unauthorized impacts or take of special-status species and their habitats.

    The training shall include distribution of an environmental training brochure, and collection of signatures from all attendees acknowledging their participation in the training. Subsequent trainings shall be provided by the qualified biologist as needed for additional construction or operations workers through the life of the project.

14. **Protection of Biological Resources – Pre-Construction and Pre-Disturbance Surveys.** The approved biologist(s) shall conduct pre-construction surveys for special-status species as described below:
    a. No more than 14 days before the start of onsite activities or any activities planned for areas previously undisturbed by project activities, the biologist(s) shall conduct a field evaluation of the nature and extent of Western snowy plover activity in the project area and shall identify measures needed to ensure construction activities minimize potential effects to the species. Those measures shall, at a minimum, meet the standards and requirements of the mitigation measures included in Exhibit 5 as well as those included in subsection (d) of this special condition. Those measures shall also be submitted for Executive Director review and approval at least five days before the start of construction activities. The Permittee shall implement the measures as approved by the Executive Director.
    b. Prior to construction or activities planned for areas previously undisturbed by project activities, the approved biologist(s) shall coordinate with construction crews to identify and mark the boundaries of project disturbance, locations of special-status species and suitable habitat, avoidance areas, and access routes. GPS data collected during preconstruction surveys completed in 2012, 2013, and 2014 shall be used to flag the known locations of Monterey spineflower and buckwheat for avoidance during construction. Avoidance buffers shall be established and flagged or fenced as necessary to avoid surface disturbance or vegetation removal. The monitoring biologist shall fit the placement of flags and fencing to minimize impacts to any sensitive resources. At a minimum, the biologist shall direct the placement of highly visible exclusion fencing (snow fence or similar) at the following locations:
        - around sensitive snowy plover habitat areas that do not require regular access;
        - areas along the northern edge of the CEMEX accessway in the vicinity of the settling ponds; and
        - between the work area and any identified occurrence of Monterey spineflower or buckwheat within 10 feet of the existing accessway or work area.

All delineated areas of temporary fencing shall be shown on grading plans and shall remain in place and functional throughout the duration of construction and decommissioning activities.

c. The approved biologist(s) shall conduct surveys for Monterey spineflower and buckwheat (host plant for Smith's blue butterfly) within all project disturbance areas and within 20 feet of project boundaries during the blooming period for the spineflower (April-June) to identify and record the most current known locations of these species in the project vicinity. Surveys shall be conducted by a qualified botanist, and shall include collection of Global Positioning System (GPS) data points for use during flagging of sensitive plant species locations and avoidance buffers prior to construction.

d. Starting no later than February 1 of each year of project construction, operation, and decommissioning, the approved biologist(s) shall conduct breeding and nesting surveys of sensitive avian species within 500 feet of the project footprint. The approved biologist(s) shall continue those surveys at least once per week during periods of project construction, well re-packing, and decommissioning that occur between February 1 and October 1 each year.

In the event that any sensitive species are present in the project area but do not exhibit reproductive behavior and are not within the estimated breeding/reproductive cycle of the subject species, the qualified biologist shall either: (1) initiate a salvage and relocation program prior to any excavation/maintenance activities to move sensitive species by hand to safe locations elsewhere along the project reach or (2) as appropriate, implement a resource avoidance program with sufficient buffer areas to ensure adverse impacts to such resources are avoided. The Permittee shall also immediately notify the Executive Director of the presence of such species and which of the above actions are being taken. If the presence of any such sensitive species requires review by the United States Fish and Wildlife Service and/or the California Department of Fish and Game, then no development activities shall be allowed or continue until any such review and authorizations to proceed are received and also authorizes construction to proceed.

If an active nest of a federally or state-listed threatened or endangered species, species of special concern, or any species of raptor or heron is found, the Permittee shall notify the appropriate State and Federal wildlife agencies within 24 hours, and shall develop an appropriate action specific to each incident. The Permittee shall notify the California Coastal Commission in writing by facsimile or e-mail within 24 hours and consult with the Commission regarding determinations of State and Federal agencies.

If the biologist(s) identify an active nest of any federally- or state-listed threatened or endangered species, species of special concern, or any species of raptor or heron within 300 feet of construction activities (500 feet for raptors), the biologist(s) shall monitor bird behavior and construction noise levels. The biologist(s) shall be present at all relevant construction meetings and during all significant construction activities (those with potential noise impacts) to ensure that nesting birds are not disturbed by

construction-related noise. The biologist(s) shall monitor birds and noise every day at the beginning of the project and during all periods of significant construction activities. Construction activities may occur only if construction noise levels are at or below a peak of 65 dB at the nest(s) site. If construction noise exceeds a peak level of 65 dB at the nest(s) site, sound mitigation measures such as sound shields, blankets around smaller equipment, mixing concrete batches off-site, use of mufflers, and minimizing the use of back-up alarms shall be employed. If these sound mitigation measures do not reduce noise levels, construction within 300 ft. (500 ft. for raptors) of the nesting areas shall cease and shall not re-start until either new sound mitigation can be employed or nesting is complete.

If active plover nests are located within 300 feet of the project or access routes, avoidance buffers shall be established to minimize potential disturbance of nesting activity, and the biologist shall coordinate with and accompany the Permittee's operational staff as necessary during the nesting season to guide access and activities to avoid impacts to nesting plovers. The biologist shall contact the USFWS and CDFW immediately if a nest is found in areas near the wellhead that could be affected by project operations. Operations shall be immediately suspended until the Permittee submits to the Executive Director written authorization to proceed from the USFWS.

If, after starting project activities, the Permittee must stop construction due to the presence of sensitive species or due to the lack of necessary approvals or permits (e.g., a lease from the State Lands Commission), the Permittee shall remove and properly store all project-related equipment and vehicles away from the project site in a manner that does not adversely affect sensitive species.

15. **Project Area Restoration.** PRIOR TO COMMENCEMENT OF CONSTRUCTION, the Permittee shall prepare a Restoration Plan for review and approval by the Executive Director that is consistent with the City of Marina restoration requirements as codified in Municipal Code Section 17.41.100. The Plan shall include, at a minimum:
    a. a description of the habitat characteristics and extent of the area to be restored, which shall include, at a minimum, all areas of temporary disturbance in the project footprint other than those areas actively in use by CEMEX for mining purposes;
    b. performance standards and success criteria to be used;
    c. a minimum 3:1 ratio of native plants to be replaced within the affected area;
    d. an invasive species control program to be implemented for the duration of the project;
    e. the timing of proposed restoration activities;
    f. proposed methods to monitor restoration performance and success for at least five years following initiation of the Plan; and
    g. identification of all relevant conditions, requirements, and approvals by regulatory agencies needed to implement the Plan.

    The Permittee shall implement the Plan: (1) during and immediately following construction and prior to operation of the test well, and (2) during and immediately following decommissioning activities.

Success criteria will include plant cover and species composition/diversity, which shall meet or exceed adjacent undisturbed dune habitat on the CEMEX parcel as determined by the biological monitor. Success criteria shall, at a minimum, be consistent with the requirements of the existing Lapis Revegetation Plan prepared for the RMC Lonestar Lapis Sand Plant (25 percent average vegetative cover and species diversity of all species listed in Group A of the Plan present and providing at least 1 percent cover).

16. **Invasive Species Control.** The Permittee shall remove and properly dispose of at a certified landfill all invasive or exotic plants disturbed or removed during project activities. The Permittee shall use existing on-site soils for fill material to the extent feasible. If the use of imported fill material is necessary, the imported material must be obtained from a source that is known to be free of invasive plant species, or the material must consist of purchased clean material.

17. **Posting of Bond.** To ensure timely removal, PRIOR TO COMMENCEMENT OF CONSTRUCTION, the Permittee shall provide to the Commission a surety bond or similar security device acceptable to the Executive Director for $1,000,000 (one million dollars), and naming the Coastal Commission as the assured, to guarantee the Permittee's compliance with Special Conditions 6 and 15. The surety bond or other security device shall be maintained in full force and effect at all times until Special Conditions 6 and 15 have been met.

Permit No. **A-3-MRA-14-0050-A1**

COASTAL DEVELOPMENT PERMIT AMENDMENT

On October 6, 2015, by a vote of 12-0, the California Coastal Commission granted to California American Water Company Coastal Development Permit Amendment No. A-3-MRA-14-0050-A1, subject to the attached standard and special conditions, for development consisting of:

> Construction, operation, and decommissioning of a test slant well and associated monitoring wells, equipment, and infrastructure at the CEMEX sand mining facility.

The development is located in the coastal zone in the City of Marina, County of Monterey, and in the Commission's retained jurisdiction.

Issued on behalf of the Coastal Commission on October 13, 2015.

CHARLES LESTER
Executive Director

Matt Dole

for By: ALISON DETTMER
Deputy Director, Energy, Ocean Resources, and Federal Consistency Division

Acknowledgment:

The undersigned permittee(s) acknowledges receipt of this permit and agrees to abide by all terms and conditions thereof.

The undersigned permittee(s) acknowledges that Government Code Section 818.4, which states in pertinent part, that: "A public entity is not liable for injury caused by the issuance...of any permit..." applies to the issuance of this permit.

IMPORTANT: THE PERMIT IS NOT VALID UNLESS AND UNTIL A COPY OF THE PERMIT WITH THE SIGNED ACKNOWLEDGMENT HAS BEEN RETURNED TO THE COMMISSION OFFICE. (*14 Cal. Admin. Code Section 13158(a)*.)

10/13/15
Date

Signature of Permittee or Representative

SPECIAL CONDITIONS

This **Special Condition** modifies **Special Condition 11** as initially imposed by the Commission in Coastal Development Permit A-3-MRA-14-0050. Standard Conditions 1-5 and Special Conditions 1-10 and 12-17 of that permit shall remain in full force and effect. **Special Condition 11** now requires:

> "**Protection of Nearby Wells.** PRIOR TO STARTING PROJECT-RELATED PUMPING TESTS, the Permittee shall install monitoring devices at a minimum of four wells on the CEMEX site, within 2000 feet of the test well, and one or more offsite wells to record groundwater and salinity levels within the wells and shall provide to the Executive Director the baseline groundwater and Total Dissolved Solids ("TDS") levels in those wells prior to commencement of pumping from the test well.
>
> The Permittee, in coordination with the Hydrogeology Working Group, shall identify groundwater elevation trends and TDS level trends in the groundwater basin resulting from regional influences such as groundwater withdrawals, rainfall events, increases or decreases in streamflow contributions, and other influences. During the project pumping tests, the Permittee shall, at least once per day, monitor groundwater and TDS levels within the monitoring wells in person and/or with electronic logging devices. The Permittee shall post data collected from all monitoring wells on a publicly-available internet site at least once per week and shall provide all monitoring data to the Executive Director upon request.
>
> The Hydrogeology Working Group shall review data from the monitoring wells and prepare a monthly report that shall be submitted to the Executive Director that documents the groundwater elevation trends and TDS level trends resulting from regional influences. If during the pumping tests, data collected from Monitoring Well-4S ("MW4-S") or Monitoring Well-4M ("MW-4M") during any weekly monitoring period show either a decrease in groundwater levels that exceeds an identified decrease in regional groundwater level trends by 1.5 feet or more or show an increase in TDS levels that exceeds an identified increase in regional TDS level trends by two thousand parts per million or more, the Permittee shall immediately stop the pumping test and inform the Executive Director. The Hydrogeology Working Group shall examine the data from Monitoring Well 4 if the pumping test is stopped due to either of these causes.
>
> If, based on the above review of monitoring data, the Executive Director or the Hydrogeology Working Group determines that the pumping test caused, at MW-4S or MW4-M, either a decrease in groundwater level of 1.5 feet or more or caused an increase in TDS levels of two thousand parts per million or more in excess of identified regional trends, then the Permittee shall not re-start the pumping test until receiving an amendment to this permit; otherwise the Executive Director will allow the pumping test to resume."

Report User Name:	WMassoll
Report Computer Name:	WKST52
Application:	WinSitu.exe
Application Version:	5.6.27.1

Log File Properties

File Name	MPWSP MW-4D LT TEST_2017-10-05_18-32-15-175.wsl
Create Date	10/5/2017 18:32

Device Properties

Device	Aqua TROLL 200			
Site	MPWSP MW-4D			
Device Name				
Serial Number	483442			
Firmware Version	2.01			
Hardware Version	4			
Device Address	1			
Device Comm Cfg	19200	8	Even	1 (Modbus-RTU)
Used Memory	0			
Used Battery	7			

Log Configuration

Log Name	MPWSP MW-4D LT TEST
Created By	WMassoll
Computer Name	PROBOOK2
Application	WinSitu.exe
Application Version	5.6.27.1
Create Date	9/29/2017 11:12:58 AM Pacific Daylight Time
Log Setup Time Zone	Pacific Daylight Time
Notes Size(bytes)	4096
Overwrite when full	Enabled
Scheduled Start Time	9/29/2017 11:30:00 AM Pacific Daylight Time
Scheduled Stop Time	No Stop Time
Type	Linear
Interval	Days: 0 hrs: 00 mins: 15 secs: 00

Level Reference Settings At Log Creation

Level Measurement Mode	Depth
Specific Gravity	1.024

Other Log Settings

Depth of Probe:	0.954035 (ft)	
Head Pressure:	0.423527 (PSI)	
Temperature:	19.4979 (C)	
Specific Conductivity Model:	Standard Methods	
	Reference Temperature:	25
	Temperature Coefficient:	0.0191
TDS Factor:	0.68
